The physical properties of lead are compared with those of other metals and materials in Tables 2.1(a) and 2.1(b). 2.1.2 DENSITY. Lead has a particularly high density, 11.3g cm⁻³ compared with many other metals (e.g. iron 7.8g cm⁻³, copper 8.9g cm⁻³, aluminium 2.7g cm⁻³). Lead owes its high density to two factors:

CIPSA Category Management Conference on 6th April 2011, and is the first major study of category management in the region. It seeks to give us a much better understanding of the current state of the art of category management as a discipline within Australian and New Zealand. It offers some real insight into

The state of the art of category management - CIPS

Implementing category management in the federal government by Paul Donato and Matthew Lisk Federal agencies are facing increasing pressure to reduce costs in the wake of ever-decreasing budgets. At the same time, these agencies are being asked to maintain and, in many instances, increase their level of service and responsibility.

Implementing category management in the federal government

place of the CAS number. If the category of chemical is an EPCRA section 313, then the section 313 category code is also included in the CAS number column.

LIST OF LISTS - US EPA

Lead's close-packed face-centered cubic structure and high atomic weight result in a density of 11.34 g/cm³, which is greater than that of common metals such as iron (7.87 g/cm³), copper (8.93 g/cm³), and zinc (7.14 g/cm³). This density is the origin of the idiom to go over like a lead balloon.

Lead - Wikipedia

The Greeks mined lead on a large scale from 650 onwards and not only knew how to obtain the metal but how to convert this to white lead. Because of its superb covering power, this was the basis of paints for more than 2000 years, until the middle of the last century.
