## **Leeches Lice And Lampreys A Natural History Of Skin And**

In their mode of locomotion and hermaphrodite reproductive arrangement leeches resemble monogeneans and some leeches ventilate their bodies by means of body undulations (Mann, 1962) in a similar way to the monogenean *Entobdella soleae* (Chapter 3). However, this resemblance is superficial and leeches and monogeneans are unrelated and structurally very different.

According to Huys & Boxshall (1991), the origin of the Poecilostomatoidea is linked with a shift in their mate-grasping behaviour. During copulation the male holds the female with the maxillipeds not with the antennules, and this has resulted in marked sexual dimorphism in the maxillipeds in all known members of the group.
