This book contains all 24 examples from the classic book Model Building in Mathematical Programming by H. Paul Williams. For each example, the problem statement is first repeated verbatim from Williams's™ book.1 Then the problem is solved using the OPTMODEL procedure in SAS/OR software.

### **SAS/OR 12.3 User's Guide: Mathematical Programming Examples**

Dynamic Programming is a mathematical programming technique which fragments a large problem into several smaller problems. The approach is to solve the all the smaller, easier problems individually in order to reach a solution to the original problem.

These are called nonnegativity constraints and are often found in linear programming problems. The other constraints are then called the main constraints. The function to be maximized (or minimized) is called the objective function. Here, the objective function is  $x_1 + x_2$ .
